

Bucket Elevators

When you're ready to add a bucket elevator to your operation, or replace an existing elevator, you want something that will last.

Our bucket elevators are built to last, providing strength and stability due to the reinforcing angle flange every four feet.

Our boot sections - 5' tall on our single-trunk legs and 6' tall on our double-trunk legs - utilize heavy-duty U.S.-made pillow block bearings and self-cleaning boot pulleys.

Removable side panels allow for easy removal of the entire boot pulley assembly, making maintenance headache free.

- Heavy stainless steel construction
- Capacities from 70 TPH to 800 TPH
- Ladders, safety cages and platforms in mild steel or stainless steel
- Stainless or mild steel spouting
- Stainless steel distributors or valves
- Support towers with optional stairs and platforms
- OSHA-approved safety harness systems available
- Single or double trunking
- Multiple point inspection doors
- Split hoods for easy access to drive roller
